Sachin Sharma	201301068	sachin.sharma@students.iiit.ac.in	N.A.

We all four members met Mr. Sreekanth Puram on 12/08/14 for first time to discuss the details of the project and what actually the requirements of projects are and what are we supposed to do. He made us familiar with WebERP; it is an Enterprise Resource Planning web based platform on which a company's database about handling its staff data, vendors, information about customers etc can be recorded and tracked.

He explained us that with emerging new technologies (newer versions of browsers, javascript updates etc), better features lack behind in existing UI of WebERP, which is purely based on PHP. So we are required to change UI of this WebERP using MVC framework without changing its functionalities.

He also said us that after the completion of our project it would be made open source, so that interested people can also work on it. As explained by him, our work will be mainly concentrated around PHP. Before our next meeting we have to get familiar with PHP, MySQL, and Laravel framework and it is scheduled on 20 August'14.
